What is **LED Light**?

Light Emitting diodes(LED's)are the efficient lighting solution for today's energy issues. The future of lighting will soon see a wide spread adoption and use of white energy efficient LED light bulbs.

The operational life of white LED lamps is 50,000 hours. This is 10+years of continus operation, or 22 years of 50% operation. The long operational life of an LED lamp is a stark constart to the average life of an incandescent bulb, which is approximately 5000 hours. The long life span of the LED has naturally a direct impact on maintenance requirment.
